

Instructions for Use

Ovodarium – Wellness sculptures with curing power through warmth, sound and aroma installation

1. The wellness area (heating, ventilation) is activated by using the main switch at the entrance (upper switch).
2. Afterwards, the heating and ventilation for the ovodarium can be activated (lower switch). The seating benches will be comfortable in around 30 minutes.
3. The system runs for 90 minutes, and another click of the switch will extend it for another 90 minutes.
4. The music system is controlled from the vestibule and must be separately engaged there (radio, CD-player + USP and iPod access).
5. The fragrance dispenser in the ovodarium can be activated with a rotary knob and several drops of aroma oil.

Steam sauna

6. The steam sauna is operated by means of its own switch panel on the left next to the sauna door. The operating knob (upper left) activates the steam generator (the knob has a dim red glow).
7. The sauna light can be turned on and off by using the knob beneath it. Steam will begin flowing into the sauna 10 minutes after it has been turned on.
8. Several drops of fragrance oil can be put into the container above the steam duct to create a pleasant aroma in the sauna.

Attention: In no case should fragrance oil be used or contact made with the steam duct while the sauna is in operation since doing so could pose the risk of being burned!

9. Please turn off the steam sauna after using it by using the knob on the upper left part of the operating panel (the red knob for light goes out).
10. When leaving the wellness area, please use the main switch at the entrance to turn off the system, the lights and the music system.

The End
